Introduction – Adjoint Code

We consider vector function $F : \mathbb{R}^n \rightarrow \mathbb{R}^m$, with

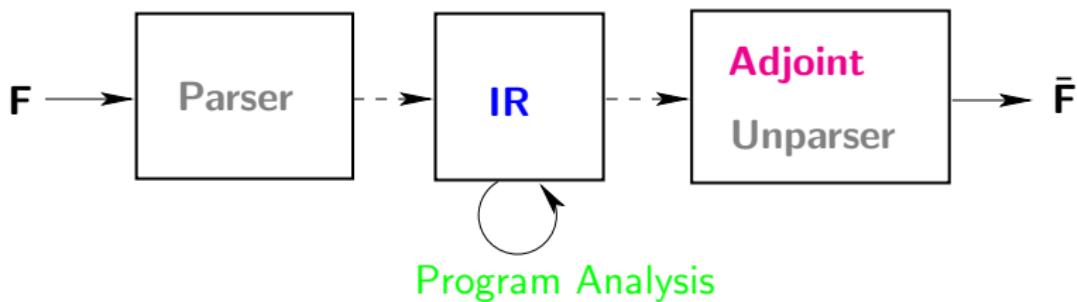

$$F(\textcolor{red}{x}) = \textcolor{blue}{y} \quad .$$

The **adjoint code** of F computes

$$\bar{x} = F'(\textcolor{red}{x})^T \cdot \bar{y} \quad .$$

- Complexity $O(m)$
- **Data Flow Reversal**

Adjoints by Source Transformation

Adjoint Projects

- **ACTS** in collaboration with Argonne, MIT and Rice (**OpenAD**, platform for source transformation)
- **CompAD** in collaboration with, Hertfordshire (**F95 Compiler**)
